Northern Lights Teaching School Alliance, established in 2011, is a partnership of schools across North and West Yorkshire including the metropolitan area of Bradford. The Alliance is led by Feversham College, Bradford and Skipton Girls' High School, which has gained national recognition as a provider of high quality STEM education. Designated a regional Science Learning Partnership and a Stimulating Physics Lead School by the Institute of Physics, we were named the Enthuse STEM Secondary School of the Year 2017.

Bradford Birth to 19 SCITT programme's expertise will be instrumental in the design and delivery of the paid internship programme and in mentoring of interns.

The majority of interns' time will be spent in the classroom. A Professional Learning Programme, based on that provided to trainee teachers, will include sessions on child development and learning, safeguarding, managing behaviour and SEND, outstanding teaching and learning and assessing and evaluating teaching and learning.

Support through the programme will be through mentoring, paired placements, group meetings and an online learning platform including a discussion forum and reflective journal.
